Rahul Negi

Senior Software Engineer | Backend, Payments & Distributed Systems

manu.rahul28@gmail.com | github.com/insignificantGuy | LinkedIn: rrahul-negi

PROFILE

Software engineer with experience at Razorpay and Amazon, focused on reliable APIs, payment flows, distributed systems, observability, and safe delivery. Works across backend services, React/TypeScript applications, and cloud infrastructure.

EXPERIENCE

Razorpay | Software Developer | Joined July 2024 | Bengaluru, India

• Designed direct-to-core payment routing paths and backward-compatible merchant migrations.

• Built fallback and rollback mechanisms for critical payment flows, including authentication and fee handling.

• Worked on tokenisation service boundaries and payment notification reliability.

• Mentored two SDE interns and participated in engineering design and code reviews.

Amazon | Software Developer | August 2022 - May 2024 | Gurugram, India

• Built bulk CSV export functionality supporting up to 50,000 entries.

• Developed tooling to extract information from support request emails and documents.

• Addressed recurring support issues through long-term engineering fixes.

• Owned incident investigation, root-cause analysis, and safe production fixes.

TECHNICAL SKILLS

Languages & web: Go, Java, Node.js, Python, C++, React, TypeScript.

Backend: REST APIs, authentication and authorization, payment routing, tokenisation, idempotency, feature flags, backward compatibility.

Systems & data: Kafka, MySQL, PostgreSQL, DynamoDB, MongoDB, fault tolerance, rate limiting, rollback strategies, schema migrations.

Operations & delivery: AWS, GCP, CI/CD, Prometheus, Grafana, testing, production debugging, incident response, Git, Linux.

SELECTED INDEPENDENT PROJECTS

fastPay - Go payment routing: mock-provider routing, client-supplied idempotency keys, bounded retries, asynchronous webhooks, and ledger reconciliation. PostgreSQL, Gin, GORM. Demonstration project; no real payment gateways.

Flowguard - Go/Kafka pipeline: bounded workers, hysteresis-based backpressure, circuit breaking, in-memory fallback DLQ, and Prometheus/Grafana monitoring. Controlled local experiment evidence; not production scale claims.

Slotly - Go booking API: company-scoped permissions, JWT sessions, slot overlap checks, and transactional booking with row locks. MySQL, Gin, GORM. Local implementation; public documentation may differ.

EDUCATION

ADGITM (NIEC), Delhi | B.Tech in Computer Science | August 2018 - July 2022 | GPA 9.2/10

Foundations: operating systems, data structures, algorithms, networking, databases.
